Introduction

USA Notify is a cloud based service that gives medical facilities, service industries, government organizations and companies, as well as individuals, the ability to notify their customers, patients, residents and partners. Automated reminders, alerts and notifications can be sent effectively via phone, email and/or text message at optimal times.

Effortlessly import existing clients and notifications into USANotify's services and promptly integrate into your current business.

Time is always a factor in business and it is always beneficial to allocate your resources effectively. USA Notify can help to free up staff members for greater customer service and ensure that your message is received.

Simple and Effective

Once you add a new notification to the system, you don't have to worry about anything else. Your clients will be notified by your (or better yet, their) chosen method reliably and in a timely manner.

USANotify's dedicated platforms can be accessed from anywhere via Cloud Computing with no equipment to purchase.

Three Ways to Remind

USANotify utilizes voice calls, text messages, and emails. This ensures that your clients will be reminded of their appointments through multiple methods. You can have peace of mind knowing that USANotify will reliably reach your clients using one or all three types of notifications.

Appointment Reminders

USANotify allows you to add all your currently scheduled appointments using a simple import tool or add new appointments manually. You have the capability to search appointments based on date, doctor, location or much more. You can also view detailed reports of appointments and notification outcomes.

Group Notifications

The Group Notification feature allows you to send out a custom notification to any number of people. You can group your clients into lists and notify them on a list-by-list basis.

When initiating a new group notification, you can type out your own messages to be sent, and an advanced text-to-speech engine will convert your text into a voice prompt for the voice call. You can also pick and choose which type of group notification you wish to send.

Emergency Broadcasts

With USANotify, be equipped to announce alerts in advance or in the aftermath of a disaster. Broadcast localized phone alerts, email alerts and/or sms alerts to residents in potentially impacted areas or messages in the aftermath of a disaster and provide emergency aid assistance.

Versatility

USANotify is accessed through a web browser, meaning that you can use it from phones, tablets, and computers as long as you have an internet connection. This flexibility allows you to view and organize your appointments and notifications in more places, in response to more situations.

Scalability

USANotify Dialout systems and servers can send out 1000's of calls, text messages and emails per hour. Our services are scalable from just a few appointment reminders to thousands of notifications.
